

The SDU-3 provides 132" of reach with a lift capacity of 17,000 lbs. extended, and 55,000 lbs. retracted.

Century's SDU-3 is available with the optional Low Rider Stinger option which has a lift capacity of 18,000 lbs. at its fully extended reach of 156". The fabricated low profile stinger design provides as much as 30° increased clearance between the underlift and towed vehicle, making it ideal for towing transit buses or motor coaches with set back axles.

Century's aluminum body option is designed to optimize space for your lift forks and popular towing attachments. Additionally, front tunnel saddle boxes are available in a variety of sizes to meet your specific equipment storage needs.

The Century Rotators has the power to perform under difficult recovery situations.

With 360° of continuous boom rotation and travel locks located 180° apart, the boom on the Century Rotator can be carried in a rear or forward position when mounted on a chassis with adequate clearance. With the boom in the forward position, more weight can be transferred to the front axle when towing a heavy load. This also provides clearance over the deck of the rotator when towing trucks or fire engines with front overhang, such as ladders, snorkles or buckets.
